1. What's new?

New features:

- New parameter types for manufacturer specific product reasons (requires products with native ETS4 product database)

Improvements

- Update of ETS dongle driver to a newer version
- Extend of diagnosis wizard with more system information, Plug In version
- Error messages when trying to import projects form a higher ETS(5) version
- Improved and optimised handling of computer memory (RAM) allocation on special ETS App uses cases

2. What has to be considered?

- N/A

3. Solved Problems

- Wrong reset of GRP flag in conjunction with Plug In use
- Crash on adding an Group Object with an existing Group Address of type x/y/255
- Exporting projects with project status "Finished commissioning" now works correctly
- Local download of IP devices with mask 57B0 over its own "management"

4. Download

- New installations (setup): Download and install version 4.1.5 from MyKNX and subsequently online update of ETS.
- Existing installations: Via ETS4 online update.
