1. What's new?

New features:

- N/A

Improvements

- Modal dialogs uses now system dialogs instead of ETS5 internal dialogs.
- Panel search highlights now found results in yellow in the detail view
- Project check now checks the character length of names and descriptions (50/80 chars). Starting from this length shows in the project check a warning, that some Plug Ins might have a problem. This check is valid for group addresses, topology, building and devices.
- With dynamic folders it is possible to filter after also DPT's (at group addresses and communication objects)
- Release of following ETS Apps of KNX Association for ETS5
 - Split & Merge
 - Replace Product

2. What has to be considered?

- N/A

3. Solved Problems

- Selection in panel reworked
- Memory problem in workspace corrected
- Line scan, line is preselected now correctly
- Hyperlink navigation out of reports/ project check corrected
- Synchronization between (established) connections in ETS "Bus tabs" and the displayed connections within a project (in view of synchronization). Before it was possible to have different views.
- New projects where not possible after creation to add them to the archive. This is now possible.
- Copied coupler gets now the correct address x.y.0.
- The „last value“ column in group addresses is filled now correctly with the last received value if the group monitor runs.
- DPTs where not shown in group monitor. If in group monitor options, if the DPT decoding is active, the DPTs now displayed correctly. Before they were shown hexadecimal coded in the monitor.
- Several internal bugs on copy/ cut operations or on reset

4. Download

- New installations (setup): From [MyKNX](#) and subsequently online update of ETS.
- Existing installations: Via ETS online update.
