1. What's new?

New Features

-

Improvements

- Removing associations is now possible direct at the group address
- Non clearly defined message on closing monitor is improved
- Open of context menu in detail view is possible on lines now
- Memory usage improved, inserting of > 100 devices out of the online catalog do not lead anymore to an „Out of Memory“ (threshold no on > 2...3 x 1000 devices)

2. What has to be considered?

- N/A

3. Solved Problems

- Automatic scroll in monitor if view is active at the last line is now always active
- Sorting after source/ destination address in monitor is now correct
- Coping within detail view copies no in correct order
- Scrolling in “connection manager” with many connections now possible
- Import of group addresses takes over no GA descriptions correctly (updates this)
- ETS crash when on changing the parameter tab on special products
- Activation/ deactivation of ETS App „Online Catalog“ shows now immediately after activation the correct catalog data
- ETS exception captured if server address on IP connection cannot be “dissolved” on runtime
- Complete download of an entire line in a ETS project is now possible
- Handling / takeover of special characters in project password solved (e.g. „¿“)
- Continued inserting of (special) devices after close/ reopen of project is now working properly
- In compatibility mode deactivated ETS App could not be activated again in this mode, problem now solved
- Deletion of „group ranges“ on free GA addressing is no possible with correct dialog
- Change on GA's within a project, copy over separate projects (GA is transferred over the coupler) plus moving of middle groups now lead to an correct reset of coupler flags
- Deactivation of ETS App “Project Tracing” from ETS4 projects in ETS is now possible with the password correctly
- Creation of GA's in free GA structure with hexadecimal view and leading „\$“ corrected
- Download order of devices within a line now correct (lower IA → higher IA)

- Deletion of history in Navigation bar on operation „Device Compare“ now possible
- Filtering of – in project - invalid, but editable values in „dynamic folders“ do not raises an ETS exception anymore
- Several translation errors corrected
- Several view update problems corrected
- Deletion of „dynamic folders“ in detail view now possible
- Displaying data of ETS App „Project Tracing“ after project export/- import is now correct
- Double assignment on a PL Domain Address prohibited
- Functional extend in context menu is always complete now depending on the call
- Context menu can also be called on „empty“ spaces
- Confirmation/ dialog on „Restore“ of standard device parameters if there active GO
→ GA links would be disappearing.
