1. What's new?

New Features

1. Integration of KNX IP Secure and KNX Data Secure in ETS, the different flavors on KNX Secure plus corresponding procedures/ settings are described in detail in the ETS5 help.
2. Introduction of restore points for automatic backup of project work when closing the ETS project.

Improvements

1. A software update of ETS5 is now possible also in ETS5 DEMO mode
2. Improvement of project integrity test when saving a project while working on it.
3. Improved window panel handling on viewing different content of the same project (keyword "full screen" monitor despite multiple panels in one window)
4. Optimization of "ETS" dashboard screen on local/ archived projects
5. Optimization of parameter dialog regarding space, view of more parameters
6. Redesign of password dialogs incl. view of password strength
7. Improved set/ (explicit) reset of DPT's on group addresses
8. View of linked GA's in tool tip on mouse hover over a group object

2. What has to be considered?

- N/A

3. Solved Problems

1. ETS App "Extended Copy", copying in topology root causes error, the problem is solved
2. Progress bar on transfer parameter and flags is not shown on longer operations, the problem is solved
3. ETS App "Split & Merge", correct takeover of sending GA when merging projects
4. Insert of devices from catalog per drag & drop in topology root (backbone line) is now possible
5. Despite an ETS dialog in foreground, in some cases it was possible to edit other properties too (background windows), the problem is solved
6. Parked devices currently incorporated in power consumptions, even if they are not actively in the line, the problem is solved

4. Download

- New installations (setup): From [MyKNX](#).
- Existing installations: Via ETS online update.
